TTTech Joins the AVnu Alliance

Alliance membership continues to grow in 2015 with addition of TTTech to the Industrial segment.

Beaverton, OR – June 16, 2015 – [AVnu Alliance](#), the industry consortium driving open standards deterministic networking through certification, has added TTTech to its membership roster to support the growing Industrial segment. As an Alliance member, TTTech is committed to developing and promoting the growth of Audio Video Bridging/Time Sensitive Networking (AVB/TSN).

This addition, along with the dozens of other members added over the past year, represent the industry's increased recognition of the benefits of standard Ethernet and interoperability through AVnu certification.

“As a technology leader in networked safety control with more than 15 years in the domain of time sensitive networking across ten different countries, joining AVnu Alliance is a natural move for TTTech. Based on extensive research, we have developed a range of products and solutions that are embedded in both Automotive and Industrial applications and align well with the Alliance's mission,” said Soren Obling, Director Networked Industries Group at TTTech. “We hope to assist the Alliance in every way to promote the use of AVB/TSN solutions.

In addition to certification, Alliance members have access to compliance tools, testing plans, and test suites enabling early internal testing. Members may also benefit from participating in member-only plug fests, offering a unique hands-on opportunity for engineers to test connectivity and interoperability.

“We are pleased that TTTech has joined the growing community of AVnu Alliance members focused on our newest segment,” said Kevin Stanton, AVnu Alliance Chairman. “TTTech brings excellent experience in industrial technology and real-time applications that will accelerate an open ecosystem of interoperable devices.”

If you are interested in joining AVnu Alliance or finding out more, please contact administration@AVnu.org.

About AVnu Alliance

The AVnu Alliance is a community creating an interoperable ecosystem of low-latency, time-synchronized, highly reliable networked devices using open standards. AVnu creates comprehensive certification programs to ensure interoperability of networked devices. The foundational technology enables deterministic synchronized networking based on IEEE Audio Video Bridging (AVB) / Time Sensitive Networking (TSN) base standards. The Alliance, in

conjunction with other complimentary standards bodies and alliances, develops complete solutions in professional AV, automotive, industrial control and consumer segments.
